

CoPassage

Dynamic Auto Sharing • Peer-to-Peer Split • Be Smart, Ride Together

The Problem

Flat Fares, No Incentive

Drivers charge the same regardless of headcount — sharing benefits no one

Riders Refuse to Share

Even when splitting is cheaper for everyone, coordination is impossible

High-Traffic Hubs Suffer

Campuses, metro stations, IT parks, railway hubs — daily wasted capacity

The Result

Low vehicle occupancy, high per-person cost, zero coordination

The Model

WHAT COPASSAGE IS NOT

~~Cab Aggregator~~

No driver accounts. No dispatch logic. Unlike Rapido or Ola.

~~Ride Hailing App~~

We don't manage the auto ride itself — ever.

WHAT COPASSAGE IS

Pure Peer-to-Peer Coordination

Board your auto offline as usual. CoPassage finds nearby riders heading the same way.

Zero Friction

Existing auto ride + CoPassage matching = shared cost. Nothing changes except your bill.

How It Works

No app changes to how you hail an auto. CoPassage layers coordination on top of your existing ride.

Two Commuter Modes

"I Got an Auto"

- Broadcast open seats
- Offline-agreed fare posted live
- Live GPS route visible to nearby riders

"I Need an Auto"

- Discover open autos within 2km corridor
- Filtered by route-direction match
- Request to join in one tap

Smart Matching Engine

- 1 2km Proximity Filter**
Only riders within your corridor qualify — no irrelevant matches
- 2 Direction-Overlap Filtering**
Bearing mismatch? Rejected automatically. No manual screening needed.
- 3 Ranked Match Scoring**
Compatibility scores like **94% / 91% / 76%** — best match wins
- 4 Live Seat-Capacity Locking**
Overbooking is impossible — seats lock in real time

Safety & Trust

1-Tap Emergency SOS

Live beacon logging with full routing awareness

Safe Share

Female-only matching preference — opt in, always respected

Safety Guardian

Designated emergency contact with live ride awareness

Mutual Confirmation

Two-sided ride confirmation before completion — no disputes

Peer Star Ratings

Duplicate-review prevention baked in

In-Ride Experience & Live Demo

In-Ride Features

-  **Real-Time GPS Heartbeat**
10-second updates over WebSockets — always live
-  **In-Ride Live Chat**
Matched commuters coordinate directly, no phone numbers shared
-  **1-Tap Google Maps Launch**
Turn-by-turn from host to co-rider pickup, instantly

Live Demo Scenarios

- 1 Direction Mismatch Rejection**
System filters incompatible routes in real time
- 2 Successful 50% Split Match**
Two riders — fare splits live on screen
- 3 Capacity-Capped 3-Request Ranking**
Best matches ranked, overflow auto-rejected
- 4 Low Rating Alert**
Safety flag surfaces on low-rated riders instantly
- 5 Safe Share Female Matching**
Preference-based matching demonstrated live

Tech Stack

Frontend

React + TypeScript + Vite + Tailwind CSS

Auth

Firebase Phone OTP bridged to Supabase Auth

Database

Supabase PostgreSQL with Row-Level Security — 9 tables

Realtime

Supabase Realtime WebSockets — 10s GPS heartbeat

Maps

Nominatim geocoding + Google Maps navigation

Infrastructure

100% free-tier deployment — zero infra cost

✅ Fully built. Fully deployed. Ready to demo right now.

Try CoPassage

Be Smart, Ride Together. CoPassage is live, deployed, and ready for judges to explore.
